Bona IC offers special effects for wooden floors

With more people than ever looking for ways to improve their homes rather than sell, homeowners are seeking unique ways to set their homes apart from others. As a result, many manufacturers have come up with several new and stunningly beautiful ideas that are giving hardwood flooring a whole new look. To meet this growing demand Bona IC has invested in the development of stains that will please consumers that are looking for new and rare wood flooring options.

Bona IC constantly monitor trends in color and design to work proactively and are continuously developing new shades to be able to meet the expectations of our customers and the floor owners. This is why we offer stains in several brown tones, but also shades that are out of the ordinary to create the different looks that homeowners and designers are looking for.

Bona IC product development always considers the application technique of the UV-finish and the production process of our customers, the parquet producers.

Stain Kit Concept will shorten lead time

- To improve customer service Bona IC has developed a special Stain kit box for each technician to use on site at the customers' plant. The box includes all the equipment that is needed to mix a new shade. The kit also contains samples of all existing shades.

Already during the autumn 2011 Bona IC plan to include 8 shades in gray scale and double colored in black, white and gray under the category Design.

A special laboratory room has been installed for research and development of stains. It includes a light cabinet that projects the light from different angles so the effect reflection has on the coated surface can be observed and analyzed. It is equipped with special lamps that can illustrate day light, black light and also indoor lamps.

Special effect pigments

the growing demand from architects, interior decorators and designers encourage wood floor manufactures to introduce innovations with unique patterns, brilliant colors, and interesting textures. Consumers want something different to add a fresh and unusual touch to their home which can express their own personality and style. The R&D team at Bona IC is proud to show Bona's possibility to offer the customers the unique styles they are looking for.

There are numerous of possibilities of exciting special effects. Only your fantasy is the limit!

The stain kit box includes technical marketing material with product- and application information and all equipment for mixing shades on site: 8 colorants, additives, pipettes and guidelines. It also includes a color map with examples of all existing shades (natural red shades and natural brown shades applied on oak) with recipe and room for "My Samples", which is the technicians own blends of shades.
