

Unique Wood Performance

Bona 8700 Ceramic Abrasives

Bona 8700 Ceramic Abrasives

Facts

Bona 8700 Ceramic Abrasives is specially developed for coarse sanding of hard lacquers like Urea Formaldehyde.

The extreme high performance is made possible by an innovative design of a grit type containing ceramic aluminium oxide which results in an aggressiveness for optimal removal. Unlike many other products the high performance is maintained throughout the sanding procedure for optimal usage and extended lifetime of the 8700. This ensures an economical work process for belt and drum sanders - even under difficult conditions.

In combination with 8300 antistatic a perfect system for achieving best wooden floor surface.

Features

- Extreme high performance
- Very good life time
- Innovative design of grit type
- Saves time and money

Technical Data

	Belts	Rolls
Available sizes:	200 x 550mm 200 x 750mm 250 x 750mm	203mm x 25m 254mm x 25m 305mm x 25m
Grain Type:	Ceramic and aluminium oxid	Ceramic and aluminium oxid
Coating:	Electrostatically, closed coat	Electrostatically, closed coat
Backing:	Y-weight cloth, polyester 36+50	Y-weight cloth, polyester 36+50
Bonding:	Synthetic resin	Synthetic resin
Coarse sanding:	On hard wood: 36+50	36+50
