

# Bona® Dust Evacuation & Containment Systems

## Why Dust Containment?

When thinking about refinishing your floors, dust-free sanding is the only way to go! Bona pioneered the most powerful, portable, and effective dust containment system removing 99.8% of dust versus traditional sanding methods. With Bona Dust Containment Systems, the nuisance and hassle of dusting and cleaning your home during an after a floor renovation is eliminated. And more importantly, it provides a healthier environment as dust has been attributed to asthma attacks and allergic reactions such as coughing, watery eyes and difficulty breathing.

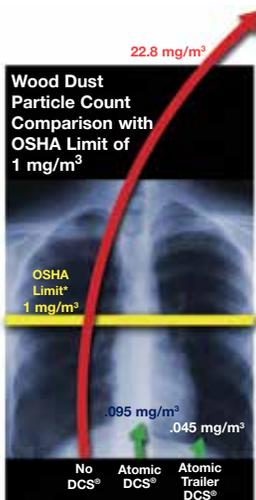

The Bona Atomic® Dust Containment Systems, which are GREENGUARD Certified for indoor air quality, will increase your satisfaction by providing higher quality results and healthier conditions in your home.

Without Dust Containment

With Dust Containment

## Why the Concern for Indoor Air Quality?

Indoor air quality is a top priority for environmental groups, consumers, and manufacturers. The Environmental Protection Agency considers indoor air quality one of the top five environmental threats to human health.\* Immediate effects of poor indoor air quality include irritation of the eyes, nose and throat, headaches, dizziness, allergies and fatigue. Indoor air pollutants may also trigger symptoms of some diseases, including asthma, reproductive and developmental problems, and cancer.

# Bona® Dust Evacuation & Containment Systems

The innovative concept of the van-mounted or trailer-mounted Bona Atomic Dust Evacuation System means having a more powerful system while providing evacuation of the airborne dust that is generated from the entire sanding process.

## Increased Satisfaction

Eliminates dust throughout the home

## Higher Quality Results

Eliminates airborne dust that would settle back down into the finish

## Healthier Working Conditions

Wood dust is a known carcinogen\*

## Time Savings

No time-consuming prep work of hanging plastic or costly clean-ups
