

Bona Antique

Controllable aging treatment for
industrial use

Bona[®]

Our environmentally friendly Bona Antique treatment is the smart way to get an aged look. You can create floors that are perfect for the trend towards darker, richer interiors.

There is no need to wait for oak or similar species to age naturally. With Bona Antique, you can offer your customers the authentic look of aged oak, as well as the speed and simplicity they demand.

Bona Antique is a pigment-free treatment (not a stain) that enhances the wood's natural variation to achieve the desired effect. Our environmentally friendly formula is safe to use and produces a stunning range of tones by reacting with the wood's natural tannins.

To enable you to vary the effect, Bona Antique is available for spray or roller application, and in three different concentrations spanning a range of intensities. Of course, you

are still free to use stains to create additional effects.

With Bona Antique, you can transform a bare new oak floor into a unique, personalised and enduring experience for your customers.

- Gives wood floors the prized aged look
- Enhances the wood's natural features
- Easy to create a variety of shades
- Safe to use and environmentally friendly
