

Bona Cork UV

Unique varnish carefully matched to cork's properties

Bona[®]

Due to cork's relative softness and flexibility it takes a special finish to bring out the material's natural qualities. Bona Cork has been specially developed to give the durability and looks that are popular on today's market.

Cork's popularity is increasing, not only for floors but also for other surfaces such as wall panelling and furniture. Like many materials, it needs a surface finish in order to maintain its looks and performance long term. Being relatively soft and flexible, cork requires a special kind of treatment.

Bona Cork has been developed to protect this unique material and deliver an outstanding package of performance and appearance. It is transparent and colourless, allowing cork's great variety of natural structure and colours to be experienced at their best.

Alongside a superb finish, Bona Cork provides a high level of long-term protection against abrasion and wear. To match cork's physical properties, Bona Cork also offers the necessary flexibility to ensure the cork and the finish move together harmoniously.

- Cork-specific finish
- Brings out the natural beauty of real cork
- Antiscratch properties
- Excellent chemical resistance
