

Bona Sun Block UV

Keeps wood parquet floors looking new for longer

Bona[®]

Nobody wants their wooden floors to discolour in sunlight, or vary in colour under furnishings. With Bona Sun Block, sunlight and wooden floors can coexist harmoniously.

Sunlight changes the colour of wood. In a wooden floor, this effect may lead to the colour changing noticeably over time. Perhaps more importantly in the shorter term, it also creates a visually unpleasant patchwork of different shades where the floor has been covered by rugs or furniture.

Extensively lab-tested and proven in practice, Bona Sun Block is customised for use on your production lines. It does precisely what its name suggests, protecting wooden flooring from the effects of sunlight just like a sunblock for human skin. Helping to keep the floor looking good as new for longer, our cleverly formulated filter benefits all wood species. However, it is most effective and long lasting with lighter species such as ash, beech, birch and maple.

Wooden floors treated with Bona Sun Block are particularly appealing to the most discerning customers: architects specifying floors within a tightly coherent colour scheme, or owners with a similar demand for a long-lasting colour.

- Long-term colour stability for extended "new" look
- Minimises patchwork effect beneath furnishings
- Great for light-coloured wood species
