### DIRECTIONS FOR USE

Dilute concentrate according to recommendation and clean the floor using a mop or an auto scrubber equipped with a white or tan pad. Note that excessive use of water may damage the floor. Always keep the amount of water used to clean to a minimum and be careful where the floor has open gaps. Replace the cleaning water periodically to avoid streaking.

### AUTO SCRUBBER

Recommendations for use of auto scrubber:

1. Always fill the tank with clean water prior to use.
2. Run the machine along, never across, the parquet boards.
3. Water loss from the machine must not exceed

1L/100m<sup>2</sup>. Test by adding 10 litres of water to the tank and check the remaining water after 100 m<sup>2</sup> (e.g. 5 x 20 m). 9 litres should remain in the tank.

4. Water should be removed from the floor promptly, make sure to never leave puddles when turning with the machine.
5. If distributing water with the machine, the water must be removed within 3 minutes.
6. Keep the suction bar clean and in good condition. Replace annually or if the machine is leaving puddles or too much water.
7. Do not use aggressive pads on the surface. Aggressive pads may scratch and wear on the surface. The milder the pad, the less the wear.

The information in this document and all other advice and recommendations that we provide to help and assist the applicator are based on previous experience and extensive testing but makes no claim to be complete. Because of the wide range of possible uses and conditions of application of our products, we do not relieve users from the need to carry out their own trials or to seek technical advice from Bona before use. Bona can only guarantee its products and not the construction as a whole. Observe recommendations from flooring manufacturer and the provisions of relevant standards.
